

## Cool Tips and Tricks!

The screenshot shows the 'Performance Summary' dashboard with the 'Step 1: Filter Experimentals' tab selected. The toolbar at the top includes buttons for Undo, Redo, Revert, Refresh, Pause, View: Original, Alert, Subscribe, Edit, Share, Download, Comments, and Full Screen. The dashboard content includes a welcome message for Douglas Sherman, a 'Use this page' header, and a table of experimental data. Callouts provide instructions for various functions:

- Refresh:** Refresh will show changes to In Review right away while revert removes all filters.
- View: Original:** Use View to save your current filters on this page. Make it public to share!
- Subscribe:** If you subscribe to the workbook just before when you think you're going to use this it will run faster.
- Download:** Use this to download the data on the screen.
- Comments:** Write comments about certain views for others to see what you're thinking.
- Full Screen:** Use this to remove the blue header.
